

TalkToStellar Third-Party Money Movement

Flow of funds for PIX-funded BRL conversion, Stellar USDC settlement, and Bridge payout to an approved USD destination.

Main Flow

Controls, Review, and Exception Handling

Received funds exchanged? Yes. BRL received through PIX is converted to USDC on Stellar, then routed for USD payout.

Where do funds ultimately go? Through Bridge to the customer's approved USD bank account or approved recipient account.

KYC/KYB and sanctions/AML screening are required before live external payouts through Bridge and internal review controls.

If same-name matching is required and not approved, payout is blocked for manual review.

If compliance, exchange, settlement, or payout fails, funds enter review, refund, or cancellation handling.
